## RESEARCH INTERESTS

---

Low dimensional dynamics and topology, specifically nonabelian group actions on the circle. Application of algebraic topology to formal language theory. Related topics in complex dynamics and big mapping class groups.

## PUBLICATIONS AND PREPRINTS

---

- **Ziggurat fringes are self-similar.** *Ergodic Theory and Dynamical Systems*, doi:10.1017/etds.2015.75

In this paper, we give explicit formulae for fringe lengths of the Calegari-Walker Ziggurats – i.e. graphs of extremal rotation numbers associated to positive words in free groups. These formulae reveal (partial) integral projective self-similarity in ziggurat fringes, which are low-dimensional projections of characteristic polyhedra on the bounded cohomology of free groups. This explains phenomena observed experimentally by Gordenko and Calegari-Walker.

- **A Topological proof that  $O_2$  is 2-MCFL.** [arxiv.org/abs/1710.04597](https://arxiv.org/abs/1710.04597)

In this paper, we give a new proof of Salvati's theorem that the group language  $O_2$  is 2 multiple context free using homology theory. Unlike Salvati's proof, our arguments do not use any idea specific to two-dimensions. This raises the possibility that the argument might generalize to  $O_n$ .
