

Assignment 19 (7/30)

Subhadip Chowdhury

This week we will be covering page 52-66 from the Calculus textbook. You should read those sections as we cover them in class. We covered similar examples as in page 66 today. We will do more examples tomorrow.

There are no assignments, you should be working on writing your project. I expect you to spend equal time on the project as your homework. As such, your paper and presentation should be as nicely formatted and mathematically accurate as possible. In fact, since you don't have homework, you can learn to LaTeX if you want to; and it will save you time to type up the paper.

Look in canvas for a presentation schedule of Thursday and Friday. I will post it by 5pm today.
